ESP

Snow Cover

Be The FIRST...

Take control over your Business Privacy
Secure. Influence. Shape Arc4dia SNOW service in a way that best
suits your organization

What is ESP and who is it for?

The ESP is a program that aims at providing early Arc4dia SNOW service trials to clients whose organization could benefit the most from the SNOW. To name a few potential targeted fields: international trade, high-tech, private sensitive information, defense contracts, human rights and freedom of the press. Such organizations often have a lot to lose from advanced attacks, but quite often not in a position to have security team with the special skills necessary to prevent and mitigate them.

This program enables Arc4dia to enhance the quality of the service, and allows participating organizations to benefit from the defensive security service, which could potentially find advanced attackers on your network, at zero cost to you.

What is SNOW?

SNOW is the main defense service offered by Arc4dia. It is the first cyber security monitoring service truly aimed at advanced persistent attacks. Unlike the plethora of other services claiming to protect organizations against APTs while relying on the same technologies and people behind Anti-Virus software, we are built from the ground up to provide a real fight against the advanced attackers . Using strategic and transparent techniques, our security analysts observe your network for anomalies as threats evolve.

How long does ESP last?

The program's duration is variable and will depend on the initial agreement between Arc4dia and your organization.
The base duration is 2 months, but can extend to as long as 6 months.

Main Features:

- Cutting Edge Protection
- Constantly evolving
- Free 24/7 surveillance period
- Free recurrent reports on the activities in your network
- Detection and immediate mitigation of targeted threats
- No interruptions of your company's daily processes
- Opportunity to provide feedback for service improvement

Support

Current:	Coming Soon:	Future updates:
• Windows XP up to 8.1 (workstation and servers)	• Mac OS X • Linux	• Android • iOS
