Press Release Summary: Improvements to Waveform Technology's network make give colocation facility additional bandwidth and reliability.

Press Release Body: TROY, Michigan, August 7, 2008 -- Metro Detroit data center operator **Waveform Technology**, announced today the completed upgrade of its network core, with a migration to Cisco 12000 series routers. This development will provide Waveform's customers with supreme reliability and make increased bandwidth available.

Waveform Technology's Cisco 12000 routers make up the core architecture of its network, connecting multiple data centers in southeast Michigan. The improved infrastructure gives the entire network greater bandwidth capabilities and scalability for further additions. The Cisco 12000s are premium routers, built for Internet service providers and network carriers.

"We've seen a huge increase in demand, especially at our Troy data center," said **Bill Wichers, the project's Lead Engineer**. *"Our colocation facility has attracted customers faster than anticipated, and*

their bandwidth requirements are substantial. This infrastructure investment allows us to provide our customers with the bandwidth they require and the new routers leave room for growth."

Waveform Technology's network was built to service colocation customers at multiple data centers, including the **Waveform** operated **Troy data center** which houses hundreds of customers, ranging from large cage installations to single servers. *"Cisco's 12000 series is great for this application. They have a huge capacity and a strong feature set, allowing us to offer next generation services,"* added Wichers. *"We're constantly working to improve our network and this is a great leap forward."*

About Waveform Technology
Waveform Technology is a Detroit based data center operator and service provider specializing in colocation. **Waveform's Troy data center** is a world-class facility, featuring Liebert cooling and uninterruptible power systems, along with backup generator support, unmatched connectivity, and military-grade security. Tenants of all sizes colocate in **Waveform** facilities. **Waveform Technology** is a privately held company in operation since 1992.
