Released on: October 16, 2008, 4:30 am

Press Release Author: **Novosoft**

Industry: [Computers](#), [Software](#)

Press Release Summary: Novosoft today released a new version of their flagship product Handy Backup – now with the "Certified for Windows Vista" logo.

Press Release Body: Alliance, Ohio, October 15, 2008 –**Novosoft**, an international software development and IT-consulting company, announced the release of the new **Windows Vista-certified version of Handy Backup**, award-winning data backup and disaster recovery software.

Handy Backup is the first product of Novosoft qualified for the Microsoft "**Certified for Windows Vista**" logo. After rigorous testing process, the utility has been proven to be fully compatible with all the premium features within Windows Vista and follow all policies required for the best performance.

*"It was a great experience for us to collaborate with the Microsoft certification team and become associated with the most powerful operating system of today," said **Alexander Prichalov, head of Novosoft** product department. "The logo will help customers differentiate our product in the market and further reinforce Handy Backup as the first choice in data backup software."*

The "**Certified for Windows Vista**" logo program was designed by Microsoft to make computing experience of Windows Vista users easier, safer and more reliable. Products that carry the logo have met explicit standards of reliability and quality, and are guaranteed to work perfectly with Windows Vista and Windows Vista-certified hardware.

About**Handy****Backup**

[Handy Backup](#) is a complete, fully extensible backup solution for Windows-based computers and Windows Server-based enterprise networks. It lets you create run-once and scheduled backups of your computer data and store them to any local or offsite storage you like. Server edition of Handy Backup can also back up networked workstations data.

Unlike other PC backup software, Handy Backup provides users with an opportunity to receive a solution tailored for their own requirements. It features a unique plug-in-based architecture which allows selecting any combination of functions and paying for what you need only.

Prices of the software range from \$39 for the base functionality up to \$199 for a full-featured solution which includes support for one-click backing up MS Exchange Server, MS SQL, ODBC-compatible databases, Lotus Notes, as well as support for SFTP backup destinations and a [disk imaging](#) module. The enterprise backup edition of the program, Handy Backup Server, includes 5 licenses for remote workstations and costs \$599.
