New York, NY - Xasax Corporation is challenging the boundaries and integration of network infrastructure and systems technologies through its leading edge Xasax Financial Backbone. Built on Dark Fiber routes and a la carte trading services, Xasax is exceeding customer expectations. In keeping with this mantra, **Daniel Nole was appointed Chief Operating Officer**. His mandate, to guide the process and spearhead operations in providing this ultra low latency solution to the markets.

*"Xasax is pleased to have an experienced top tier player on our team. Dan's level of expertise and industry knowledge is certainly in keeping with the Xasax gold standard of quality and service. He plays a significant role in our overall planning and execution. The entire Xasax team is excited to have him,"* said **Noah Lieske, Xasax Chief Executive Officer and Founder**.

**Mr. Nole** remarked, *"The Xasax Offering is unlike any other on the street today. Low latency has a new meaning and definition under the Xasax model; speed to market, scalability, customizability, and flexibility are the hallmarks of this next generation solution. I am pleased to be a part of this tradition of excellence and look forward to assisting Xasax in the expansion of its global reach."*

Mr. Nole's prior appointments include COO at NYFIX Millennium, Portware, and FTEN. Mr. Nole leverages his grass roots beginnings in

financial audit at Ernst & Young, as well as his trading and operations expertise on the Floor of the Boston Stock Exchange. Dan brings a unique blend and wealth of knowledge from leading financial technology companies to Xasax.

**About**

**Xasax:**

Xasax Corporation provides an ultra-low latency financial network called the Xasax Financial Backbone built by lighting diverse dark fiber paths. The XFB encompasses the majority of available liquidity in the US with dark fiber interconnections. Xasax services include proximity hosting / co-location; raw and consolidated market data; order routing and execution management systems; Vendor of Record/entitlement solutions, and historical data warehousing. This infrastructure facilitates high-frequency traders, hedge funds, and financial service providers.
