Free Flow Power Corporation, a hydropower and hydrokinetic renewable energy company, welcomes the addition of J. Mark Robinson to the company's Advisory Board.

Mr. Robinson retired in June as the Director of the Office of Energy Projects at the Federal Energy Regulatory Commission (FERC), where he was responsible for FERC's regulatory approval of new energy infrastructure development projects, including hydropower projects, transmission facilities, gas pipelines, liquefied natural gas terminals and certain forms of energy storage facilities. Mr. Robinson is currently the principal of JMR Energy Infra, which provides strategic consulting services concerning the development of major energy infrastructure.

Dan Irvin, CEO of Free Flow Power, commented, "Mark has been a respected leader at the center of US energy policy for many years. His experience and judgment are an invaluable resource for any company working to transform America's energy infrastructure. We are delighted to have him join Free Flow Power's team."

Mr. Robinson remarked, "Free Flow Power clearly represents the new vision needed to spur development of our Nation's hydropower resources. I am very pleased to be a part of what will be a strong effort to deliver more clean energy from our working rivers and oceans."

**About Free Flow Power Corporation:**

Free Flow Power Corporation (FFP) is a hydropower developer and technology company focused on using the force of rivers, streams, ocean currents, and tides to generate electricity without building new dams or diversions. FFP operates through two subsidiaries: Free Flow Power Technology LLC is manufacturing the SmarTurbine™ system to capture energy from free-flowing water, and Free Flow Power Development LLC is developing hydropower and hydrokinetic generation projects in the US, primarily in the Mississippi River Basin.
