Ridgewood, NJ – September 30, 2009 – Accession Technology is proud to announce that they now offer custom programming for Quickbooks clients. Intuit QuickBooks Software Development Kits (SDK's) enable Quickbooks users to program custom features to their out-of-the-box software. The result is a highly affordable accounting software package with expanded functionality.

QuickBooks accounting software system is an easy and economical way to automate small and growing businesses. But as companies mature, they can outgrow their entry-level business solution. Accession Technology offers [SDK's](#) as a cost-effective means to

improve your software's functionality without incurring the time and expense of a system conversion or upgrade.

SDK's enable QuickBooks users to program custom features in their standard software, building tight integrations between QuickBooks and other software. Now QuickBooks users do not have to import files or even open QuickBooks to exchange data with these other applications. Companies that want to keep their existing infrastructure (e.g. CRM, point of sale, warehouse inventory management, etc.) can build a custom link between QuickBooks and their other software, which increases the longevity of the company's accounting system. As a result, data retrieval is simplified and custom reports can be tailored for a specific business operation or segment.

"In this uncertain financial climate, companies are more willing to enhance existing software than to invest in a new infrastructure," said Aric Shelko, president of Accession Technology. "SDK's make sense because adding a few modifications to your Quickbooks accounting software can dramatically increase its performance."
