

Laughingbird Software Announces New Business Tool Product; The Business Card, Logo And Letterhead Creator

Released on: October 16, 2009, 11:54 am
Author: Marc Sylvester
Industry: [Software](#)

The [Business Card Creator](#) is now available from The Business Card Creator's website for \$39.95

Laughingbird Software is the company that invented the extremely popular Do-It-Yourself [logo design](#) software; The Logo Creator.

"The Business Card Creator does just what the name implies," Sylvester said in a recent interview from the studios of Laughingbird Productions, in Southern California. "It allows the small business owner to easily create high quality logos and place them onto modifiable [business card templates](#). The software can be used for small businesses, company websites, intranets, school web sites, and a myriad of other markets. The list is endless," he said. "It allows the small business owner to play Davey to the bigger

Goliath's that exist in the world."

Sylvester created The [Logo Creator](#) in 1998, and almost immediately, it was accepted by companies and individual clients from around the globe.

"The Business Card Creator a one of a kind design studio ...without the studio! It can save individuals, companies and small businesses a lot of time and money.," Sylvester added.

The first version, Logo Creator v1.2 was launched in July, 2000, and was the first and only logo design software on the market.

With a radical jump in technology, a newer version of The Logo Creator (v3.0), was officially introduced in July, 2003. The improvements included a more flexible design interface, greater manipulation of logo elements and imported images, and the ability to update the software via the internet.

The latest version (v5.2) of The Logo Creator is included in the new [business card creator](#) Software. Also included; uploading of your business card and letterhead designs to our partner printshop (powered by VistaPrint.). "You simply create your card designs, and the software uploads the design to the online printshop. Within days, the customer receives the cards - in full color - professionally printed.

"There is a lot of competition since we created the original Logo Creator 5 years ago," Sylvester remarked. "But," he added, "imitation is one of the highest compliments. The Business Card, Letterhead and Logo Creator can now take their businesses to a higher level of identification." (preview some of the [letterhead templates](#) and [business card designs](#))

Other products by Laughingbird Software include "The Flash Ad Creator" (create animated ad banners and email campaigns) and the ever popular "Web Graphics Creator" for creating page headers, buttons and animated eCovers.
