Industry: [Software](#)

eMaint Enterprises is proud to announce the acquisition of several new clients, the Johnson County School District, Fort Payne Water, and National Oilwell Varco.

An advertisement for eMaint CMMS software. On the left, several white dice are scattered on a light green background. To the right, the text reads: "Fact: up to 80% of all CMMS projects fail to meet expectations" with a green plus icon. Below this is the headline "Don't Gamble on CMMS" in large, bold, black letters. Underneath the headline is a large green "96%" followed by the text "96% of eMaint CMMS customers renew their subscriptions. Is there any better way to measure success?" with a green plus icon. At the bottom right, it says "How can you beat the odds? [Find out here](#)".

Fact: up to 80% of all CMMS projects fail to meet expectations +

Don't Gamble on CMMS

96% 96% of eMaint CMMS customers renew their subscriptions. Is there any better way to measure success? +

How can you beat the odds? [Find out here](#)

The maintenance team at Johnson County School District will use the eMaint X3 online [CMMS software](#) to support vehicle maintenance through planned maintenance, corrective maintenance and reporting. eMaint was selected for its configurability, ease-of-use, and strong work order and [preventative maintenance](#) capabilities.

Fort Payne Water has selected X3 Online for managing plant and system maintenance. Team leaders determined that X3 online offered the best opportunity to meet their reliability goals while managing [work order](#) needs, PM's and running reports. Other points for selection included the system's ease-of-use, web-hosted access and user definable configuration.

National Oilwell Varco has selected the eMaint X3 Online system to manage preventive maintenance operations at its R&D Lab in Houston, TX. Primary reasons for selecting eMaint included the web-hosted format, easy-to-use PM system, and built in reporting and dashboard features. Visit the eMaint website for information and screen shots of [preventive maintenance](#) for Tracking and Scheduling.

eMaint is a visionary SaaS company leading in the development of next generation on demand solutions for maintenance and asset management. Established in 1986, eMaint was among the first, if not the first, providers of [CMMS](#) (Computerized Maintenance Management) systems to embrace the power of the Internet. First released in 1998, eMaint's on demand platform for maintenance management was designed around a passion for helping customers succeed. Combining high-performance design excellence and customer-driven innovations, our on-demand CMMS solution, eMaint X3, enables organizations across the globe to manage and control maintenance and repair operations for greater productivity and profitability.
